

Sonova Quark

Brought to you by Steven Vincent Johnson and Darlene P. Coltrain, mailing address: 6666 Odana Rd. Madison WI 53719. Contact by Mail: Steve: Orionworks@charter.net, Darlene: dpcoltrain@gmail.com. All material is copyright © by Steven Vincent Johnson and Darlene P. Coltrain, unless otherwise specified. Sonova Quark is brought to you by OrionWorks. Internal layout is brought to you by Microsoft Publisher. Printing done on a HP Color Laserjet Pro MFP M277dw. Most color covers were created using CorelDraw Graphics suite and printed on a Cannon PRO-100 Photo Inkjet printer. This edition was created for Turbo Charged Party Animal

Office Chair Autopsy Report

Fig 1. Office Chair (brand New)

Fig 3. Two wood molded skeletal structures

It has been a while since my last alien autopsy report.

Bored and in desperation, I decided to perform an autopsy on my recently “retired” office chair. The goal was to extract all metallic organs parts for recycling purposes and throw away all non-recyclable tissues in the dumpster. This turned out to be a worthy endeavor.

My portable adjustable workbench served as the autopsy table. The procedure was performed in my garage on March13, 2024.

The outer imitation hide was filled with lesions, most likely due to prolonged compression of the human buttock. Initial opening of cushion cavity revealed several layers of compressed foam rubber in various stages of petrification, the result of normal ageing process. (See Fig 2).

Upon opening the seat cushion cavity two wood molded skeletal structures were extracted for closer inspection. (See Fig 3)

Fig 2. Initial opening of seat cushion cavity

Mysterious Chinese hieroglyphics were observed plastered to the backside of the two wood molded skeletal structures. Their functional purpose remains a mystery. (See Fig 4/5)

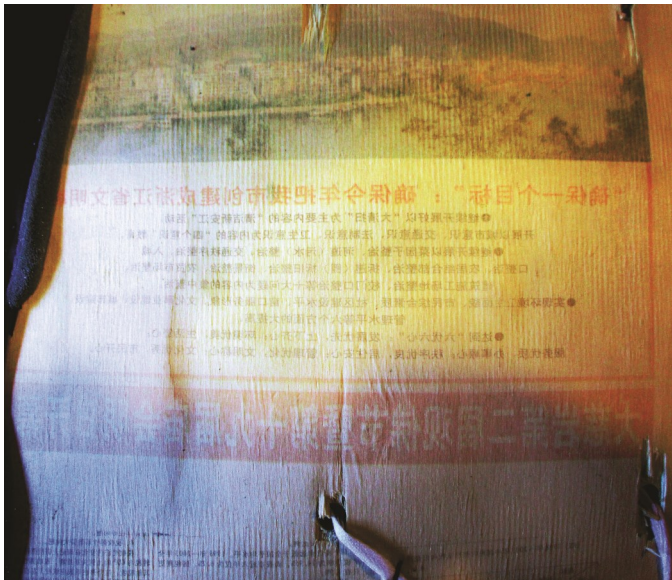

Fig 4. Chinese hieroglyphics glued to backside and photo images

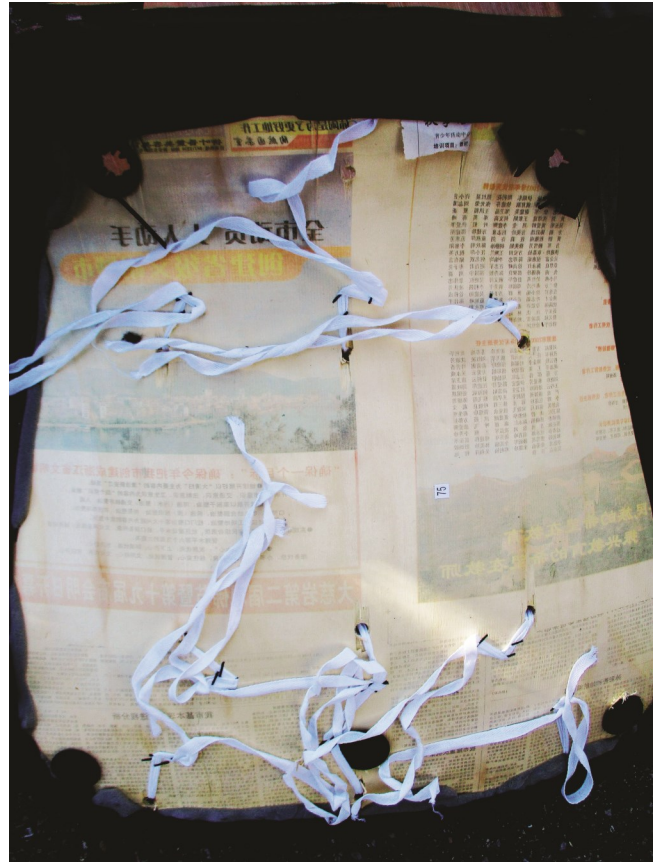

Fig 5. Chinese hieroglyphics glued to backside and photo images

It might be leftover residual "code" instructions that have been commented out of the office chair that were used in a prior pre-office chair existence.

Upon completion of the autopsy the bagged residual tissues and wood molds were discarded in the dumpster for Thursday collection. The metal was deposited in the Recycling center off of Fish Hatchery road.

While the autopsy was interesting, it pales to the complexity and speculation I have been confronted with from prior alien autopsy reports. The last delivered alien specimen was another "gray", as they have been labeled within popular culture "abduction" accounts. Again, I recorded what appears to be underdeveloped atrophied reproductive organs that were never operational. I wrote in my report that human abductees are likely being used as temporary reproductive hosts in order to perpetuate the "grays". I never know what happens to my autopsy reports after I send them in to the authorities. No one has ever gotten back to me.

Or

The Write Hemisphere

The Great Migration - *Part Two*

Cetaceans possess sentience in regions of the brain that humanoids have difficulty locking into and comprehending. Nevertheless, humanoids and cetaceans are capable of sensing the state of each other's well-being. You have historical accounts where cetaceans acted beyond the call of duty rescuing humans, even though it could have placed the rescuer in harm's way. Recently, concerted efforts initiated by humanoids are attempting to karmically pay back past debts owed. Interest incurred is long overdue.

Cetacean sonar dwarfs anything humans have yet to technologically construct. Cetaceans can discern far more internal detail than what any humanoid crafted submarine sonar or MRI scan can unpack. MRI scans typically take 15 to 30 minutes to complete. A cetacean sonar scan can map the internal organic structure of any creature in under a second. Humanoids envy cetacean's mastery of sonar detection. Cetaceans tend to vacillate between the emotions of awe and horror when contemplating humanity's manipulation of the shared global environment.

The cetacean race that evolved on Earth chose not to possess external appendages for the use of manipulating their environment. It was deliberately executed by the collective consciousness of the cetacean mind-set. The decision came about due to a prior grand cycle lived out on a different planet where their application of technology destroyed the ecosphere. It was due to ignorance and blatant disregard of the responsibility of managing the power their advanced technology had entrusted them with. They decided, this time around, to avoid being tempted to make the same mistakes again. The lack of appendages has helped the cetacean races evolve with a different set of civilization platforms, one that expresses a more intimate interrelationship with their surrounding environment.

Humans would likely express greater concern over their dumping of refuse into the planet's aquatic environment if they possessed greater awareness of what the cetacean race carries within their collective consciousness. We do not mean to imply that humanoids are somehow flawed because of this deficit. It would be more accurate for us to say that recalling past collective racial memories are not the kind of skillsets the younger souled humanoids AND cetaceans on your planet tend to be interested in developing and exploring. Young souled cetaceans do their best

to avoid human interaction and the pollution they produce whenever and wherever possible. Internally, cetaceans do their best to avoid being concerned about environmental matters for fear it might cause them to become sufficiently radicalized to a point that they would feel compelled to attempt some form of an attention getting protest incident aimed at human consumption. An example of a radicalized cetacean political stunt would be a mass beaching event. Most young souled cetaceans would rather focus on the day-to-day business of seeking out where the best fishing grounds have migrated to, or how to advance one's standing within the pod, and who to play and mate with. It tends to be the older ensouled cetaceans who can no longer avoid a growing sense of remembered prior misdeeds that to their horror is once again being played out. They are the ones more likely to become radicalized. They know they can't just swim away from clouds of pollution. Racial memories of interactions with humans tell them only the curious, brave, and the gullible are foolish enough to initiate interactions. So, what can they do? Some will beach themselves in masse. They hope it will alarm enough humans to start asking themselves WHY are they senselessly beaching themselves. They hope it gets across the point that their beaching is not some kind of mass sickness or navigational error on their part. It is a consciously chosen protest better known from the humanoid perspective as a form of *passive resistance*. Under the circumstances, it's conceivable Ghandi would likely have made a similar suggestion. If humans can make the connection that they are witnessing *passive resistance* at play, it would likely generate a lot more self-reflection among humans. It is a matter we think is long overdue.

Fortunately, there IS growing concern shown among many humans who realize they had better start putting serious effort into saving the ecology of the planet. We also realize that we, having expressed such concerns is perceived by many as us shouting from a soap box, "Save the dolphins and save your planet's ecology!" Alleged messages coming from undocumented rarified realms is a matter that the current scientific community tends to categorize as naïve, mostly harmless woo-woo "kumbaya". We, nevertheless, bring the "kumbaya" concept back to center stage because there are massive cultural transformations that tend to come about within the collective behavior of transitioning young soul to mature sole civilizations. This is particularly the case for planet-bound civilizations with intentions of eventually pursuing interstellar explorations outside the confines of their solar system. Regardless of whether they had planned for it, or not, they will inevitably encounter older interstellar civilizations residing in your local neighborhood. You'll realize you are aren't in Kansas anymore.

We will have more to say on such matters.
