All material is copyright © by Steven Vincent Johnson and Darlene P. Coltrain, unless otherwise specified. Sonova Quark is brought to you by OrionWorks. Internal layout is brought to you by Affinity Publisher. Printing done on a HP Color Laserjet Pro MFP M277dw. Most color covers were created using CorelDraw Graphics suite and printed on a Cannon PRO-100 Photo Inkjet printer. This edition was created for Turbo Charged Party Animal

March into April

has been a time of witnessing my partner in crime, my spouse, Darlene, recovering from knee surgery. Time is nearing when I'll be permanently demoted back to full-time salad assembler and dish washer. (Working at McDonalds for many years honed my dish washing skills.) Mission accomplished... almost. There still remains much painful stretching-of-the-ligaments and other tortures to be followed through on. And there's the matter of feeling confident enough to walk up and down stairs, and going outside for walks, and driving the car. It remains a work-in-progress.

Justification

I often feel like I'm witnessing the unraveling of a democracy that our founding fathers had worked so hard to establish. It's still difficult for me to comprehend the existence of a segment of our population that successfully *re-elected* a president who is, in my view, the equivalent of a 21st century narcissistic carpetbagger, a person who has repeatedly shown himself to be psychologically infested with blatant psychopathic tendencies.

I recently ran across an astute writer who posted out on FB a missing link for me, a tangible and plausible reason and motivation for why a segment of the population continues to vote for Trump, no matter what. It was never about the idolization of Trump. Trump is simply a figurehead that now gives many permission to validate repressed justifications of their hatred towards foreigners, liberals, women, trans people, and peo-

ple of color. Keeping Trump in power gives them permission to approve of the roundup and expulsion of their objects of hatred. In some cases, deportation out from our borders isn't considered harsh enough punishment and torture. They now have permission to approve of imprisoning their punching bags in other countries now possessed with prisons disturbingly reminiscent of those built during Nazi Germany's Final Solution. ...not that this revelation makes me feel any better.

FaceBook Strikes Back

I recently posted a Facebook article that outlined several practical strategies for resisting the growing presence of fascism in America. The article offered time-tested methods for organizing and resisting, drawing from past lessons on how to effectively push back. Within 24 hours, Facebook

Protesters were stun-gunned and arrested at Marjorie Taylor Greene's town hall

APRIL 16, 2025 - 2:06 PM ET

By Rachel Treisman

Police forcibly removed several protesters from Rep. Marjorie Taylor Greene's Tuesday town hall in Acworth, Ga. Mike Stewart/AP

took the post down.

I knew the article had been shared on another Facebook page, so I searched for it—only to find it had been deleted there as well. I suspect it was removed because AI bots flagged it. They were-likely trained to detect certain linguistic patterns that suggest the post may be promoting violence or instructions for causing harm to people or infrastructure. That was clearly not the article’s intent, but the bots seemed to have interpreted it as guilty-as-analyzed. It was disturbing to have been censored by an algorithm—for simply sharing advice on how to resist fascism.

Granted, someone like Marjorie Taylor Greene would probably claim I’m the real fascist, and that I should be rounded up and dealt with. It’s exactly the kind of fascist narrative I’ve come to expect from the gentle representative from Georgia.

So... Yes, I do feel disturbed... even scared about what’s happening. But I’m also encouraged by the growing number of protesters, marches, and public demonstrations that are springing up across the country. It’s big—and getting bigger every day. There’s a part of me that sometimes glimpses a broader picture taking shape. In that picture, Facebook’s attempt to neuter what its AI algorithmic code assessed to be harmful is ultimately irrelevant. People are beginning to seek each other out, to organize, to resist, to fight back—to steer this country back toward the ideals of the grand experiment. Toward something more complex, more chaotic, and more honest.

YES! Of course it’s messy!
It’s called democracy, stupid!

Are we up to the challenge?

The Write Hemisphere

On most planets where environmental conditions favor the natural development of bipedal humanoid architecture—as well as on those where proto-humanoid architecture have been deliberately seeded (as was the case in your own Earth-based evolutionary history, though this has yet to be fully mapped or genetically confirmed)—the development of tool-making skills eventually ends up impacting the LOGOS of the planet.

In regard to many forms of humanoid evolution, a critical planetary crossroads eventually emerges. It manifests as a profound nexus point, where the LOGOS of the planet communicates—directly or symbolically—with its dominant humanoid species. A conscious choice is offered: whether the planet should continue managing its own well-being alone, or will it be willing to allow a temporary transfer of certain planetary “management duties” to the dominant humanoid race. It is a contract that remains valid until the natural end of the species’ evolutionary lifespan completes.

There are now 8.2 billion humanoids living simultaneously on Earth. Never before in recorded history—or even in forgotten ages whose records no longer exist—has the Earth hosted so many individuals concurrently. The LOGOS of the planet has taken notice of this rapidly unfolding development.

With such a large population of sentient, tool-making primates all forced to live within the limits of fixed resources, conflict becomes inevitable. History shows that it doesn’t take long for humanoids—especially those with a genetic tendency toward aggression (which is quite true for Earth’s species)—to come up with creative justifications for war. Earth cultures have excelled at inventing reasons, beliefs, and narratives to initiate border conflicts. But at the root of it all, there lies a primal motive: to eliminate rival clans in order to claim their share of finite natural resources.

Occasionally, the LOGOS of the planet intervenes.

This has included encouraging the emergence of creative pathogens, famines, droughts, earthquakes, and even mega-volcano eruptions that triggered extended winters and ice ages. These interventions serve to "rearrange the furniture," so to speak—and, metaphorically, beat the dust out of the living room curtains. Sometimes, the to-do list can include : “Let’s Cull the herd—just a bit.”

Earth is once again approaching a major tipping point. But something new is also occurring. More than half of the humanoid souls currently recycling through birth and death process have accumulated sufficient “racial memory” to sense that they’ve experienced enough bloodshed to fill an entire encyclopedia on the subject of warfare, on how to kill thy neighbor. A growing majority no longer want to repeat the same old games again, of violence and conquest. They wonder if there’s a better way to handle the recurring crises of overcrowding and scarcity.

At the same time, a shrinking minority—which is now a tad less than 50%, but still a large population base that remains a real nuisance and threat to the other half of the population—haven’t had their complete fill of pillaging the planet—and each other. They remain OK with the status quo. And there’s the rub.

Over the last century, overcrowding has grown into a deadly global crisis. The LOGOS of the planet is again weighing whether to intervene. And the emerging majority of awakened, fed-up souls are beginning to realize—instinctively—that Earth’s LOGOS is not all that picky when it comes to culling. She cannot be bribed, nor can she be swayed by promises or outright bribes.

So... here you are.

What will this slowly awakening majority of adult humanoids choose to do about it? There are several actions that can be implemented to help resolve the problem. We will discuss one of them here:

For the vast majority of technologically advancing humanoid races, it becomes essential to learn how to manage environmentally sustainable energy resources responsibly and wisely. Only by doing so can a technologically oriented civilization continue its exploration of new technologies to expand its understanding of itself and its place in the cosmos. This forward momentum—this dance with innovation—appears to be the dominant blueprint your civilization has chosen to explore. It remains our assessment that it is likely your race will continue walking down this path—as first initialized at its birth place, and through its adolescence, and as we expect, toward the eventual passing-of-the-torch to another generation of sentient beings, now gestating on Earth, or perhaps another infant group (as had been the case in in your particular situation) deliberately transplanted from elsewhere.

We offer you a form of encouragement in the sense that you are right on schedule in your growing desire among the clans to find ways to cooperate for the mutual benefit of all. At a racial memory level, many clans now sense that attempts to dominate other clans for access to finite resources is no longer an effective solution. Such prior solutions are losing their power over you.

Also, a new wave of ecologically safe technologies are emerging. They are now within your civilization’s technological grasp to not only develop but to effectively commercialize them. These energy solutions are appearing in your collective awareness specifically now because in the past your civilization wasn’t yet ready to manage then responsibly. The manipulation of these new forms of energies may soon allow for clean, sustainable power that can be distributed to every person and to every region of the planet at a fraction of today’s prohibitive costs.

Some of these technologies have the potential to not only save your civilization, they will help propel everyone towards a more advanced and sustainable future. But only if they are used wisely. These gifts come with responsibility. To use them

irresponsibly will damage—or worse, utterly destroy—the underlying fabric of your society.

We are not talking about further development of wind or solar power, nor about the decades-long, quixotic quest to harness nuclear fusion. Neither are we dismissing your quests to develop any of such efforts. All research into developing eco-friendly energy sources is worthwhile. Even if a particular approach fails to deliver on its original promise, the technological knowledge gained holds immense value.

What we ARE suggesting is that there are other, lesser-known—deliberately suppressed—forms of energy generation that are now beginning to surface... and in some cases, actually resurfacing into the public domain. Some of these emerging technologies are only now beginning to be recognized as valid and achievable goals. They are gaining momentum, because they are finding “favorable winds,” thanks to the efforts of shrewd entrepreneurs and visionaries who see the potential for amassing great personal wealth and global prestige while gifting the rest of the planet with far better living conditions from what the majority of your planet’s population is currently struggling through.

Granted, there remains a risk that such breakthroughs could give birth to a new and even more powerful type of an oligarchy structure. That, too, will be something the global population may eventually need to confront. If you eventually do find the need to do so, hopefully you will do so collectively, cooperatively. The point being: if every person has enough healthy food to eat, safe and comfortable homes and healthy wilderness to thrive in, access to proper health care, and plenty of leisure time, or quality time, in their schedules to pursue countless creative goals... And if there still seems to be some kind of self-installed Zeus that is perceived to be living the high-life on top of Mount Olympus, you’ll probably find enough time in your creative schedules to formulate a well thought-out plan to deal with such matters, rather than simply off’ng them and taking all their bases are belong to us.

This is coming. From a collective perspective, there are many choices you will soon need to ponder carefully before choosing your own unique path.

What will you choose? We wait to see.

Reflections on Aging

Nibbled away by time it seems
the cracks in our sidewalks are wider
Potholes in roads are deeper.

Today I chose to be safe
Even as I rage at the limitations of age
There is yet more opportunity for joy.

Even sighing for the lost adventure
Today may have gifts unexpected.

If Time has nibbled me down to essentials
I shall have essential joy.

In her advancing age Our Charm has decided that the best bed is in the basket of clean unfolded laundry. We are perhaps guilty of indulging her.

Although she complained about it when no basket was available, a towel and sweat pants folded and left on the coffee table were adequate for a short afternoon nap.

Perhaps clean laundry to sleep on is Charm's essential joy...
